

WHAT IS CLAIMED IS:

1. A container, comprising:
 - a base;
 - a cover;
 - a sidewall comprising a corrugated wall setting onto the base and receiving the cap, wherein the corrugated wall defines a plurality of openings extending along a length of the wall, and wherein at least one of the openings includes a reinforcing member inserted therein.
2. A container according to claim 1, wherein the openings extend vertically.
3. A container according to claim 1, wherein the opening extend horizontally.
4. A container according to claim 1, wherein the sidewall comprises a first corrugated wall and a second corrugated wall.
5. A container according to claim 4, wherein the first wall defines vertical openings and the second wall defines horizontal openings, and wherein at least one of the vertical or horizontal openings includes a reinforcing member inserted therein.
6. A container according to claim 5, wherein at least one of the vertical openings includes a reinforcing member inserted therein, and at least one of the horizontal openings includes a reinforcing member inserted therein.
7. A container according to claim 2, wherein the container comprises a plurality of reinforcing members, each of the reinforcing members is inserted into an associated opening.
8. A container according to claim 7, wherein the reinforcing members are spaced apart from one another.
9. A container according to claim 1, wherein the sidewall includes a door.

10. A container according to claim 1, wherein the base comprises a stackable pallet.
11. A container according to claim 1, wherein the sidewall, cap and base form an enclosed space.
12. A container according to claim 1, wherein the sidewall forms a rectangular periphery.
13. A container according to claim 1, wherein the base and the cap are configured to nest when the container is stacked on another like container.
14. A container according to claim 1, wherein the cap and the base include support portions engaging an outer portion of the sidewall.
15. A container according to claim 1, wherein the base defines a channel for receiving the sidewall.
16. A container according to claim 1, wherein the cover defines a channel for receiving the sidewall.
17. A wall for a container, comprising:
 - a plurality of planar portions joined in edge-to-edge relation, wherein each of the planar portions defines a plurality of parallel openings extending there along;
 - a reinforcing member inserted into at least one of the openings.
18. A container system, comprising:
 - a base;
 - a cover;
 - interchangeable sidewalls setting onto the base and receiving the cap, including:

a first sidewall comprising a corrugated wall wherein the corrugated wall defines a plurality of openings extending along the wall, and wherein at least one of the openings includes a reinforcing member inserted therein; and

a second sidewall comprising a first corrugated wall portion defining a plurality of vertically extending openings along the first wall portion, and wherein at least one of the vertically extending openings includes a reinforcing member inserted therein, and a second corrugated wall portion.

19. A container system according to claim 18, wherein the second corrugated wall portion defines a plurality of horizontally extending openings, and wherein at least one of the horizontally extending openings includes a reinforcing member inserted therein.

20. A system according to claim 18, wherein the first and second sidewalls comprise corrugated plastic.
